 - S3-PD-3 3 Φ 3W, POWER FACTOR (COS θ)
 - S3-PD-3A 3 Φ 4W, POWER FACTOR (COS θ)
 - S3-UD-1 1 Φ 2W, PHASE ANGLE (Φ)
 - S3-UD-3 3 Φ 3W, PHASE ANGLE (Φ)
 - S3-UD-3A 3 Φ 4W, PHASE ANGLE (Φ)

These transducers require an auxiliary power supply and offer a highly accurate method of measuring the phase angle of the input. They have a full four quadrant capability. The output is a linear function of the phase angle between the two inputs (which can be current or voltage). The circuit can also be used as power factor transducer only added a COS θ circuit.

Output amplifier provides constant voltage or current output. Output is unaffected by load resistance provided it is within the specified range.
